

# Data Description

The data I will require to complete the Restaurant in Attica project will include:

1. The list of all Municipalities in Attica on the network which I will scrape them from Wikipedia. From this list I will be able to extract the latitude and longitude of each Municipality. Furthermore, after this step I will plot the locations on a map.
2. The Foursquare dataset from which I will have access to all venues from Attica and their location with the latitude and longitude coordinates.
