Data Description

The data I will require to complete the <u>Restaurant in Attica</u> project will include:

1. The list of all Minicipalities in Attica on the network which I will scrape them from Wikipedia. From this list I will be able to extract the latitude and logitude of each Municipality. Futhermore, after this step I will plot the locations on a map.

2. The Foursquare dataset from which I will have access to all venues from Attica and their location with the latitude and longitude coordinates.
